

Loan Management System ✨

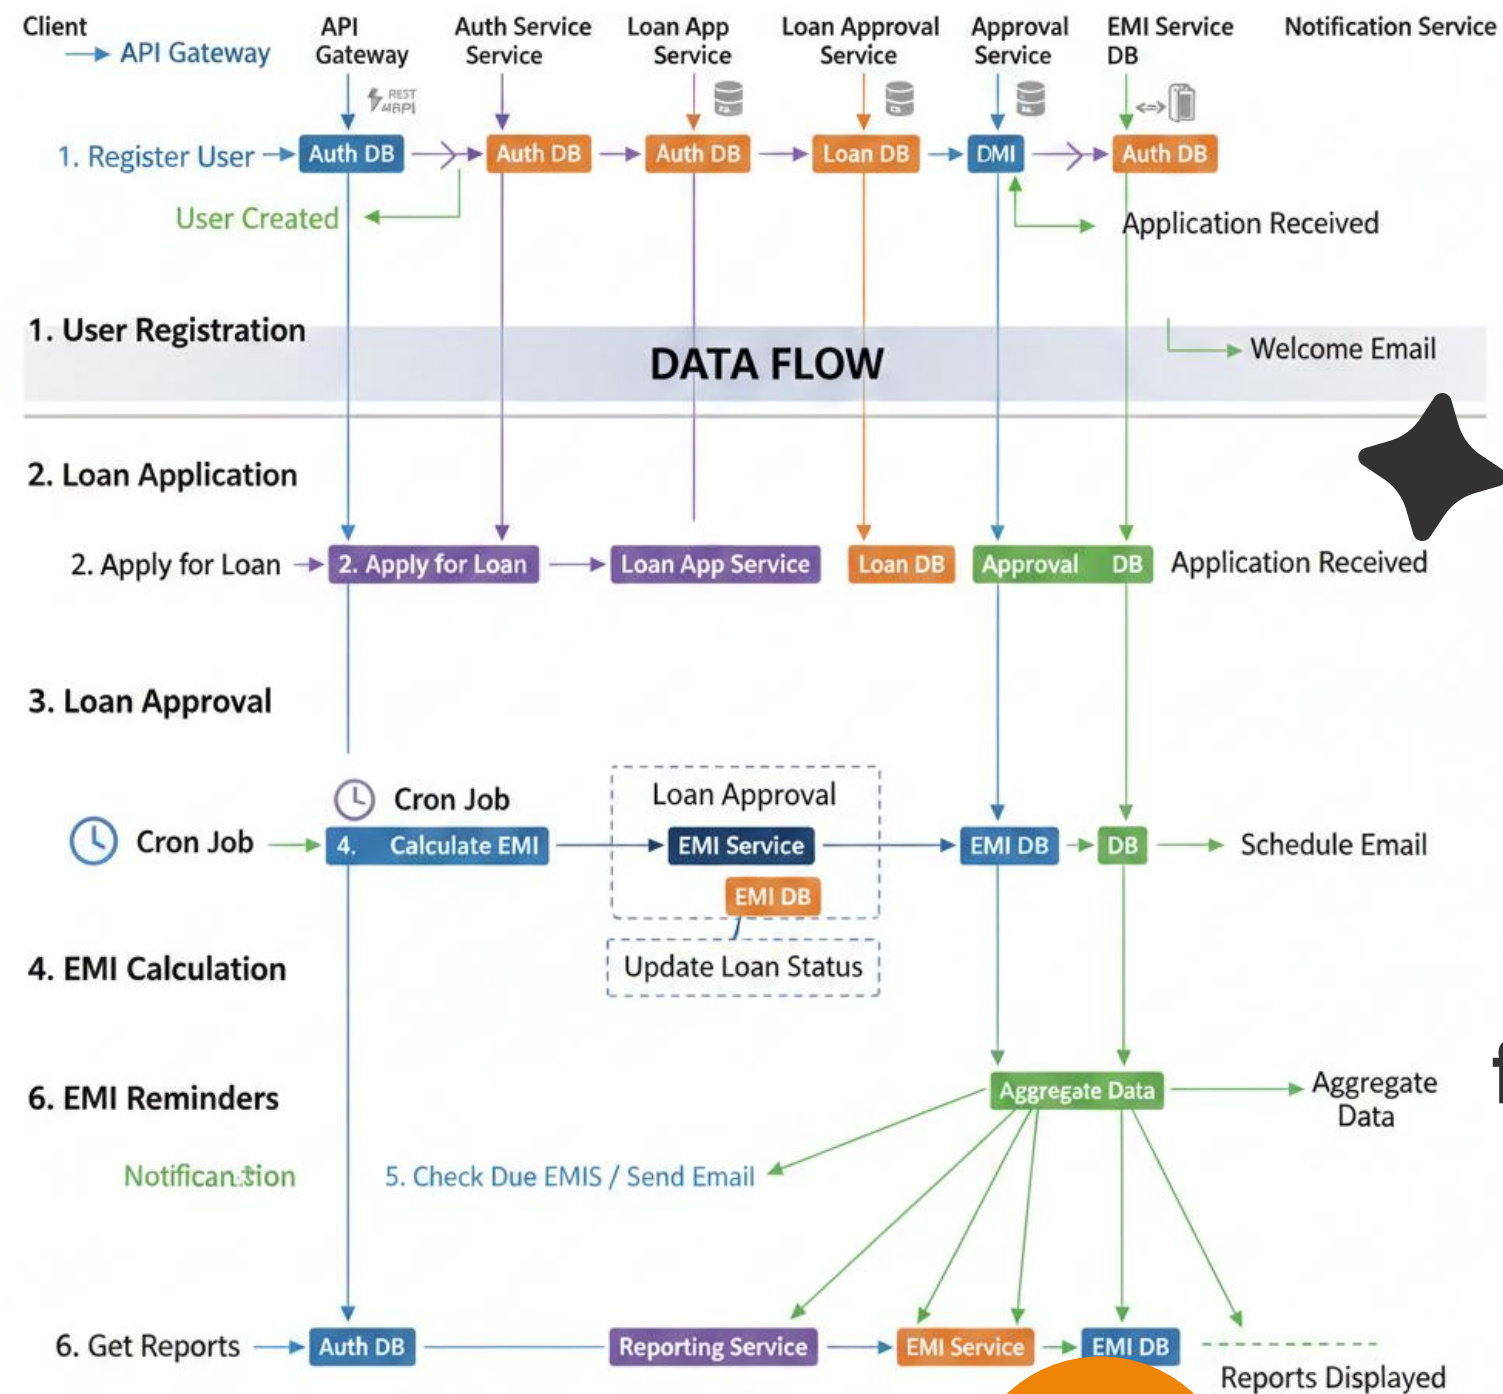

Riddhima Bhanja

Kalinga Institute of Industrial Technology

Problem Statement

Banks and financial institutions manage multiple loan products but rely on manual or semi-automated systems. These systems cause delays, lack transparency, weak tracking of EMLs, limited reporting, and security risks for sensitive financial data. There is a need for a modern, secure, and scalable digital solution to manage the complete loan lifecycle efficiently.

Business Objective

The objective of this project is to design a secure, scalable, and cloud-ready Loan Management System that digitizes the complete loan lifecycle—from application to closure. The system ensures faster processing, transparent approvals, accurate EMI tracking, secure data handling, and real-time reporting through an API-driven architecture

High-level Features

Multi-role system: Admin, Loan Officer, Customer

Online loan application and tracking

Configurable loan types, interest rates, and tenures

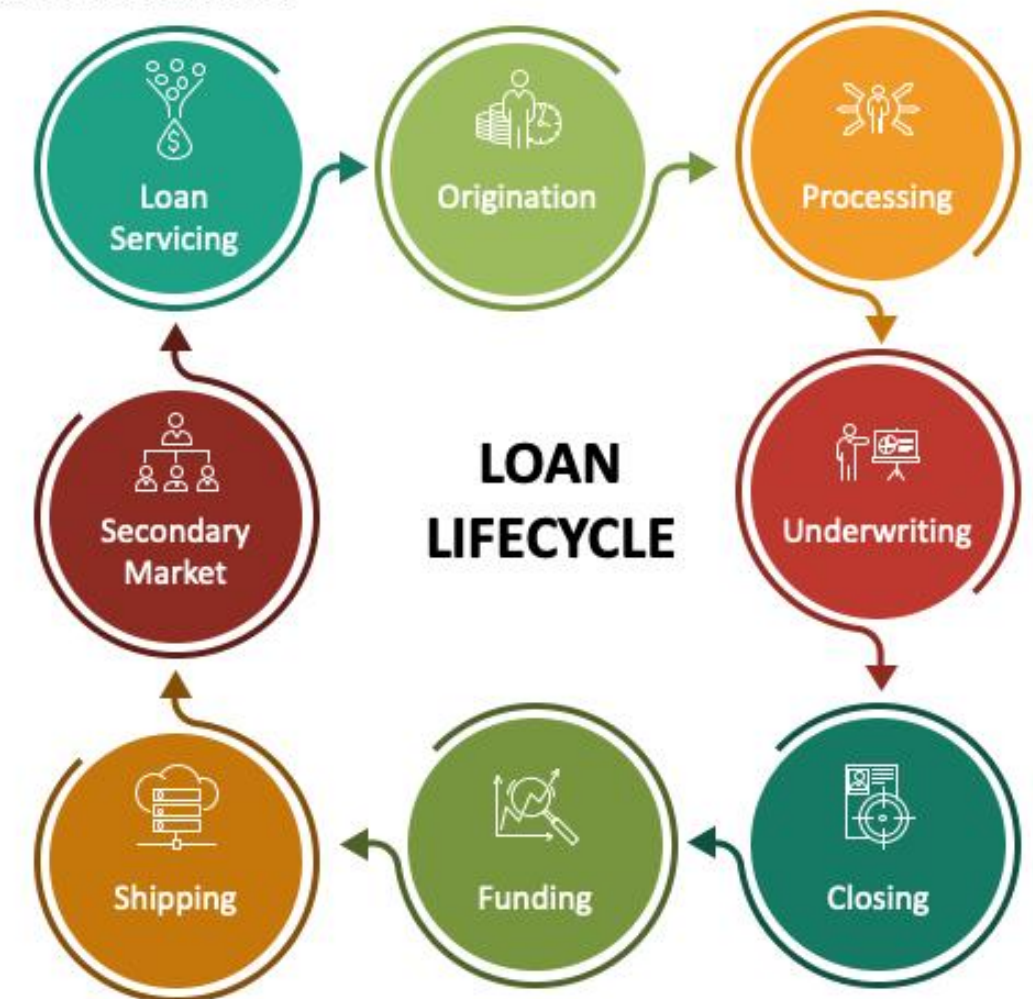

Automated EMI calculation and repayment tracking

Secure JWT-based authentication and RBAC

Real-time dashboards and reports

AN LIFECYCLE

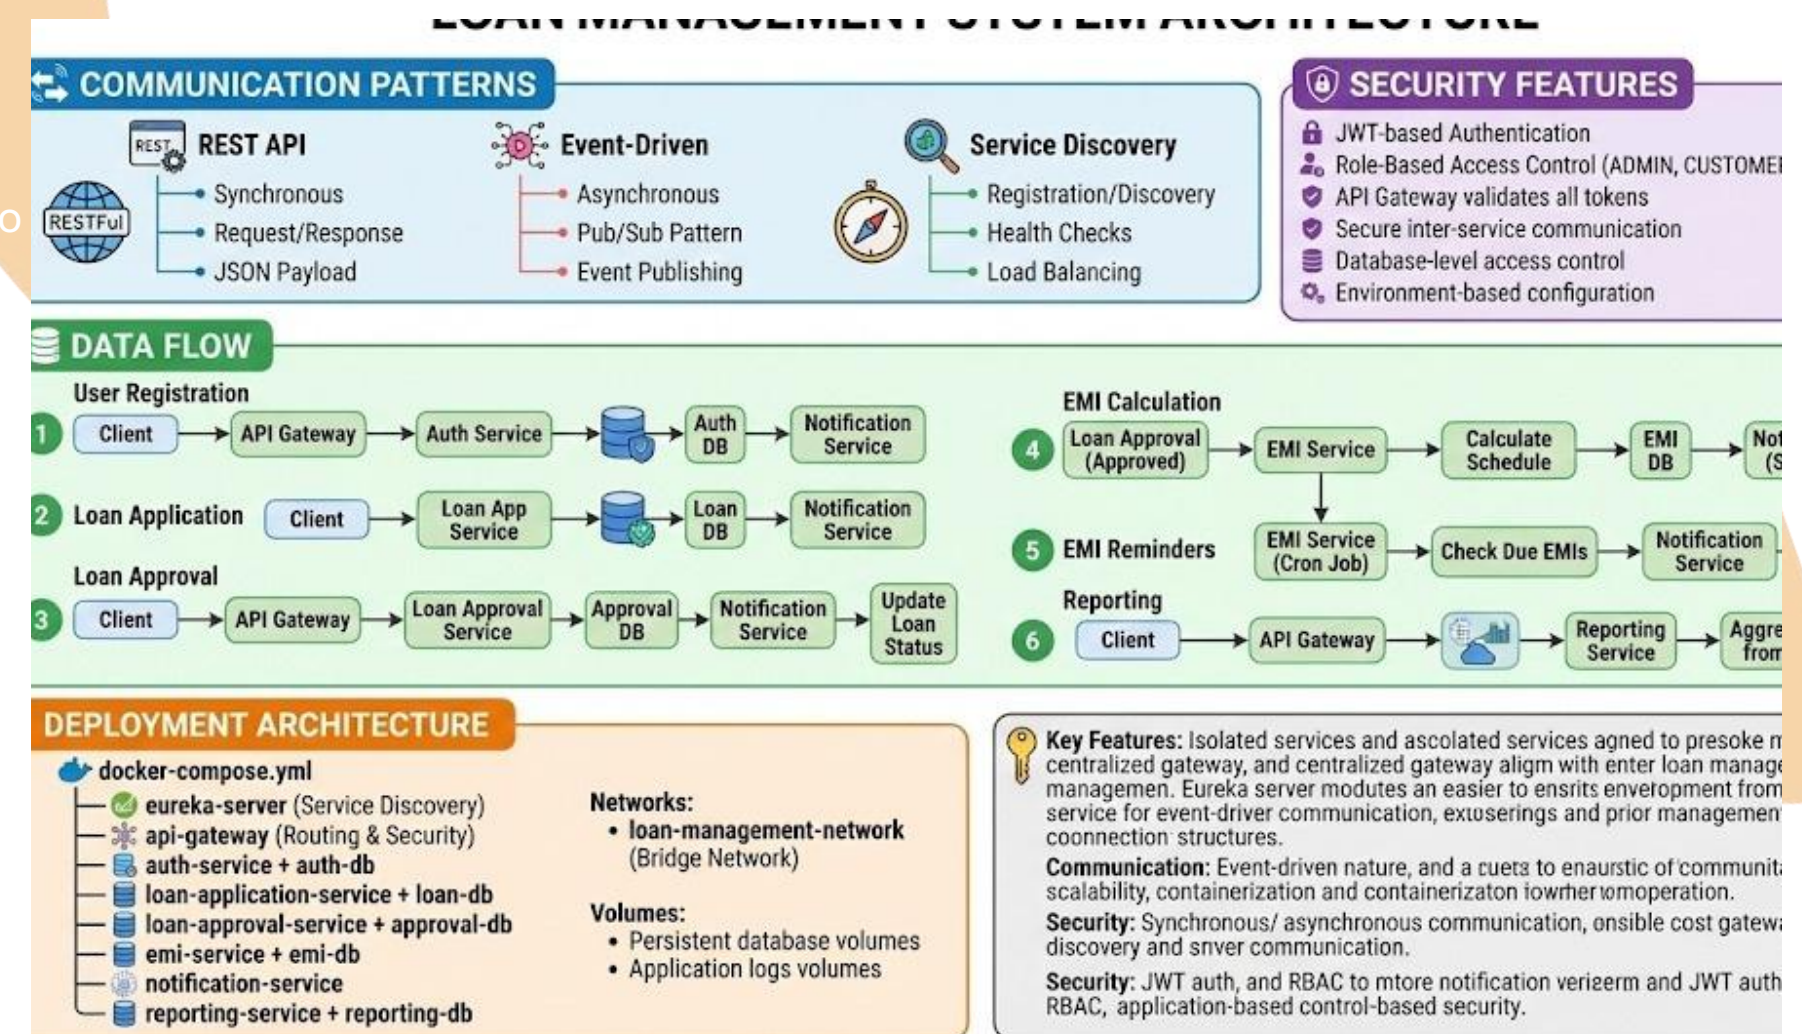

er your sub headline here

users	roles
Admin	<ul style="list-style-type: none">• Manage users, roles, loan types, interest rates
Loan Officer	<ul style="list-style-type: none">• Review applications• Approve or reject loans• Generate repayment schedules
Customer	<ul style="list-style-type: none">• Apply for loans• Track loan status and EMIs

System Architecture

The application follows a layered, modular, full-stack architecture with a secure REST-based backend and a responsive frontend. Business logic is isolated in services, APIs expose data securely, and JWT ensures authentication and authorization.

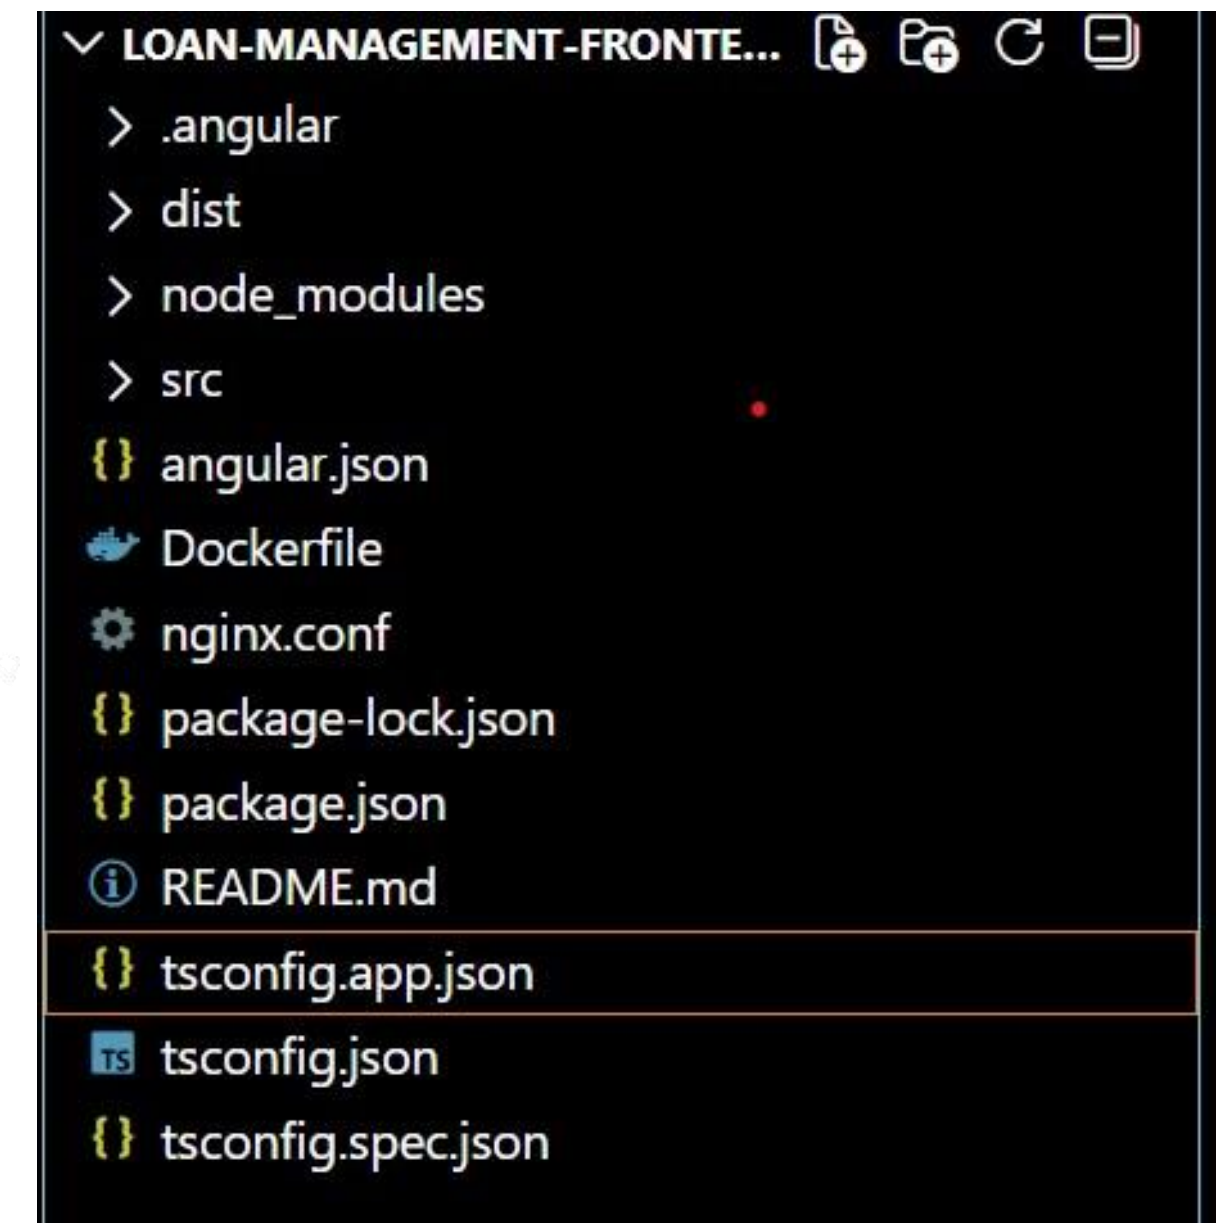

Backend Architecture

- Layered Architecture:
- Controllers
- Services
- Repositories
- DTOs / Entities
- Spring Boot REST APIs
- Centralized exception handling
- JWT-based security
- Database using JPA & Hibernate

```
> common-library
> emi-service
> loan-application-service
v loan-approval-service
  > .settings
  v src
    v main
      v java
        v com.loanmanagement.loanapproval
          v application
            v controller
              InternalLoanApprovalController
              LoanApprovalController
              LoanReviewController
            v dto
              > request
              > response
            v mapper
              LoanApprovalMapper
              LoanDisbursementMapper
          > domain
          > infrastructure
```

Frontend Architecture

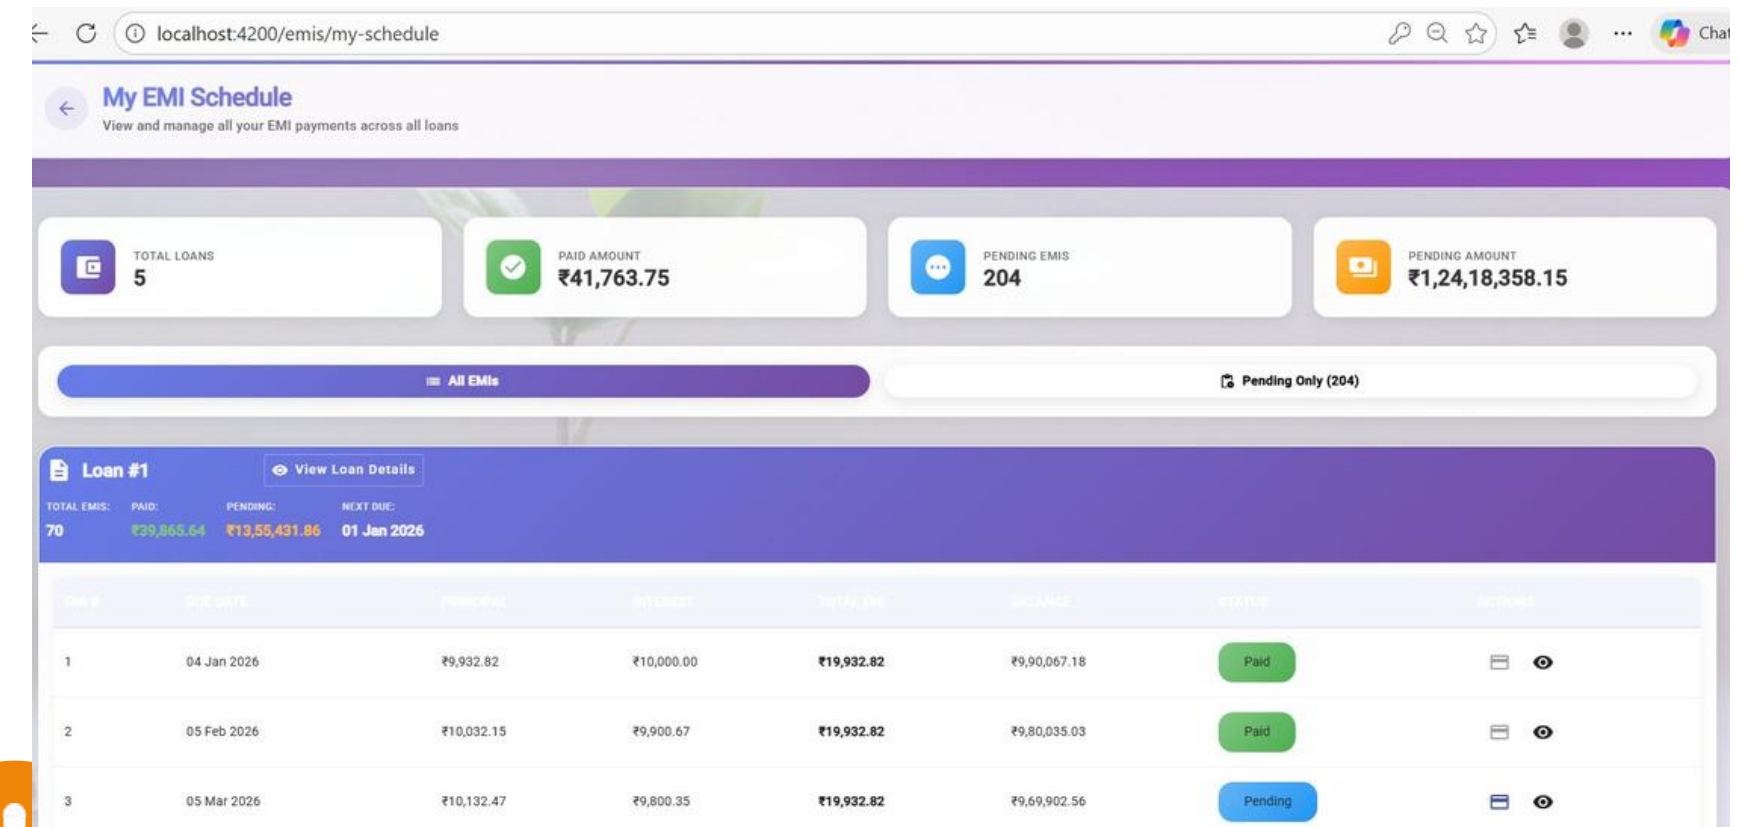

- **Modular Angular architecture**
- **Feature-based modules**
- **Reactive / Template-Driven forms**
- **JWT Interceptors & Route Guards**
- **Responsive UI using Angular Material / Bootstrap**

March 24, 2036

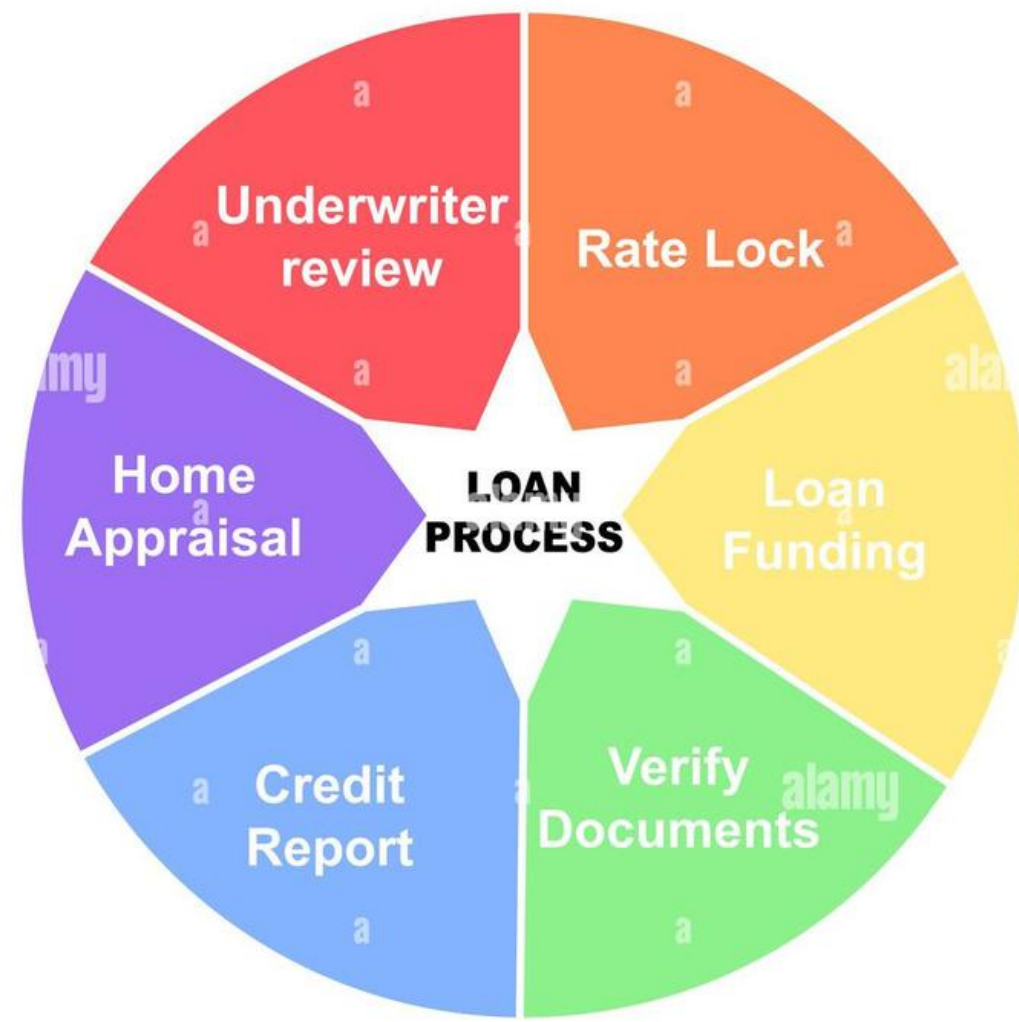

Core Modules

- User & Security Management
- Loan Application Management
- Loan Approval & Processing
- EMI & Repayment Tracking
- Reports & Dashboards
- Notifications

EMI #	DUE DATE	PRINCIPAL	INTEREST	TOTAL EMI	BALANCE	STATUS	ACTIONS
1	04 Jan 2026	₹9,932.82	₹10,000.00	₹19,932.82	₹9,90,067.18	Paid	 
2	05 Feb 2026	₹10,032.15	₹9,900.67	₹19,932.82	₹9,80,035.03	Paid	 
3	05 Mar 2026	₹10,132.47	₹9,800.35	₹19,932.82	₹9,69,902.56	Pending	 

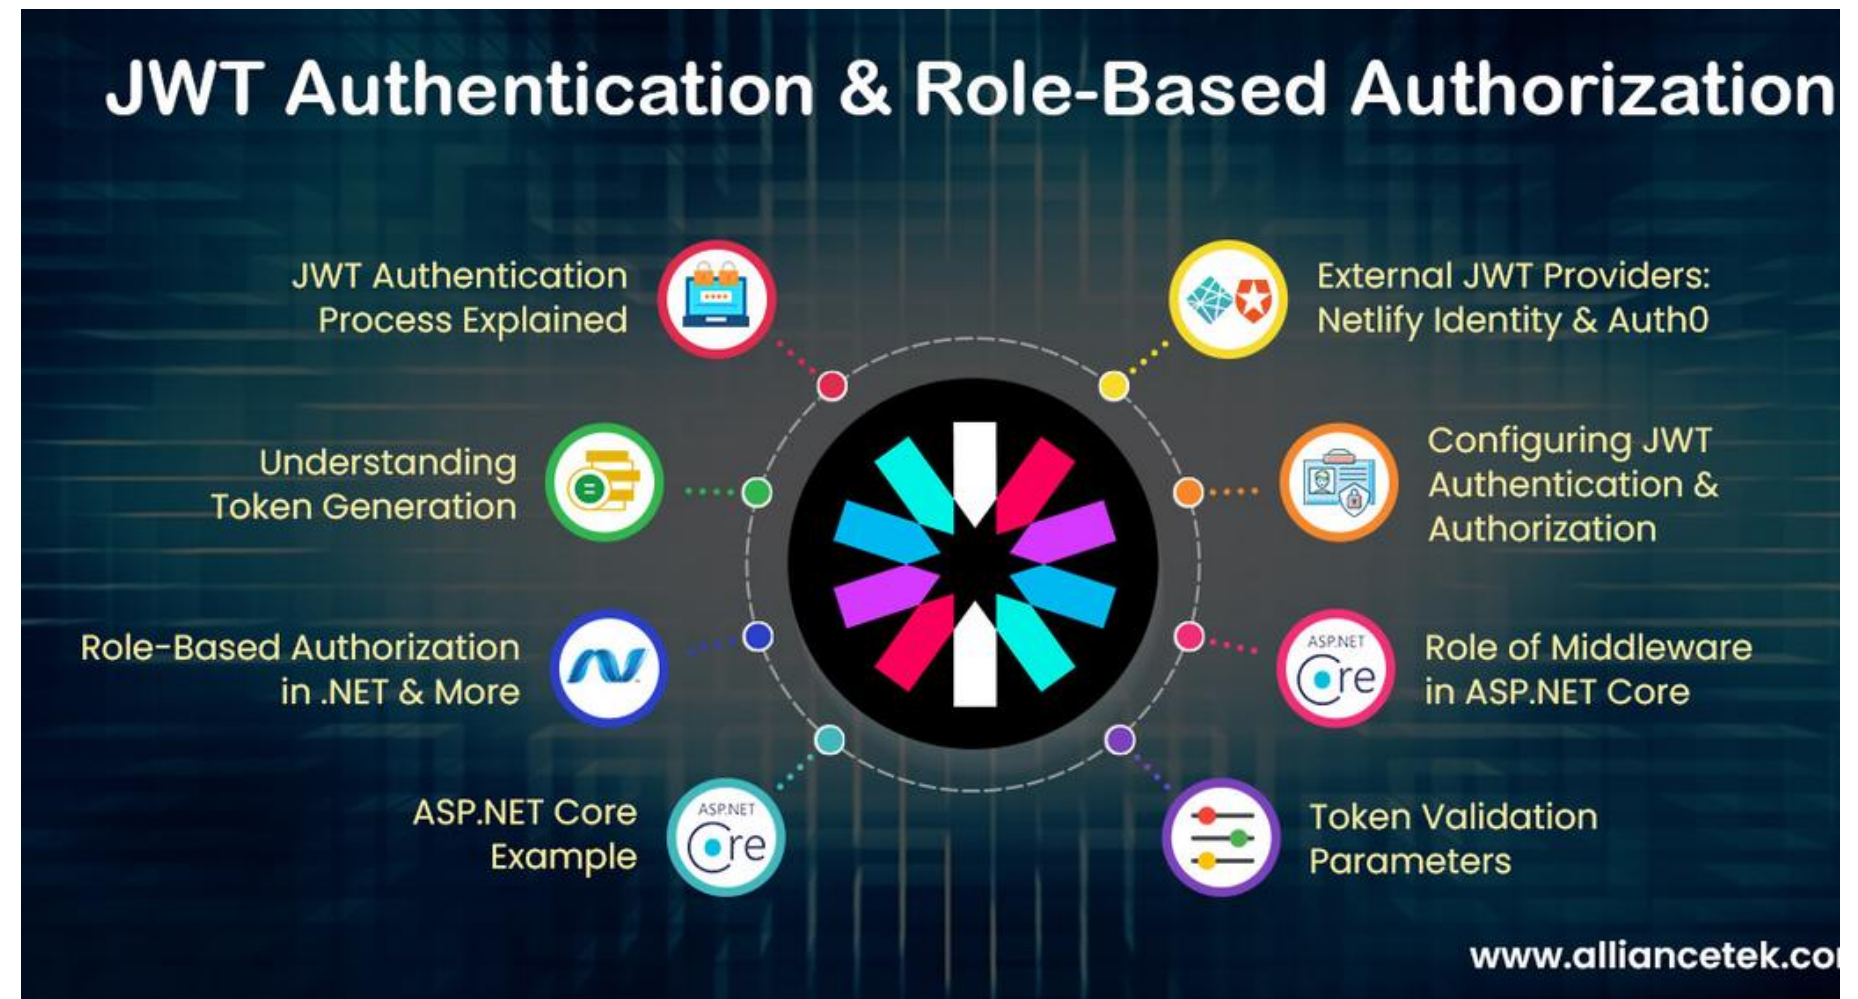

Loan Lifecycle Workflow

**Applied → Under Review →
Approved → Rejected → Closed**
**The system ensures transparent
workflow transitions, auditability,
and accurate state management
at each stage.**

Security Implementation

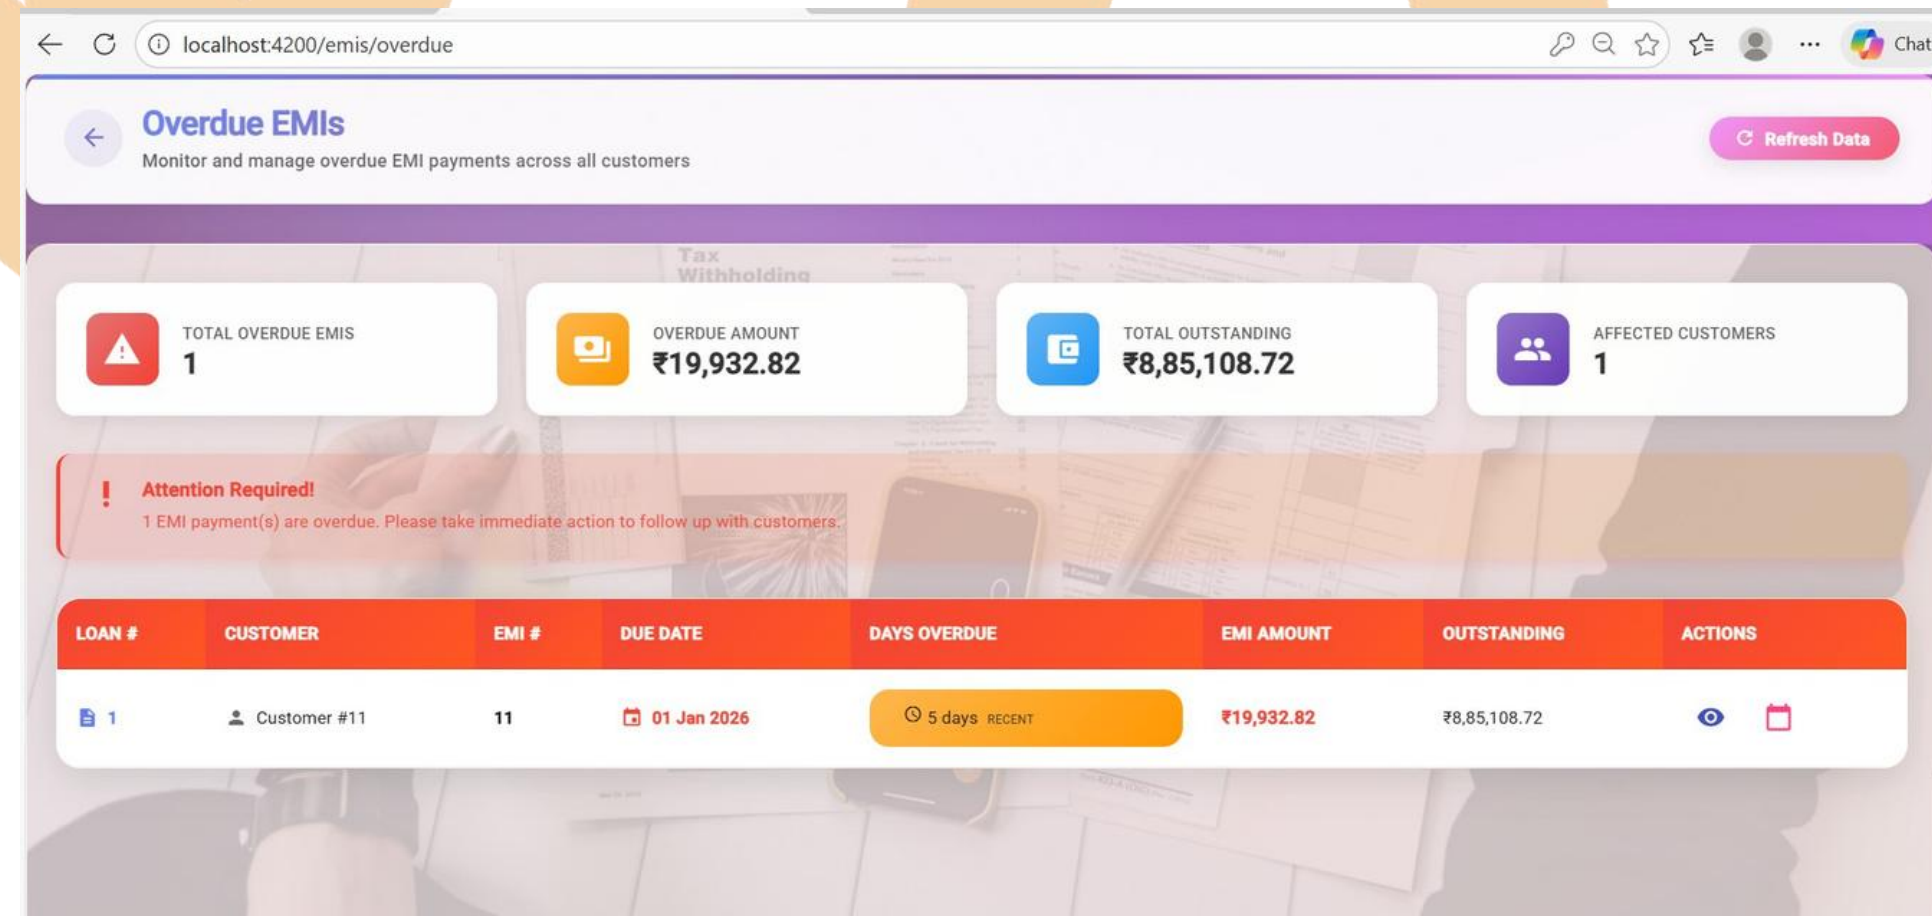

- JWT-based authentication
- Role-Based Access Control (RBAC)
- Password hashing & validation
- Secure REST endpoints
- Authorization at API level

March 24, 2036

Reporting & Dashboards

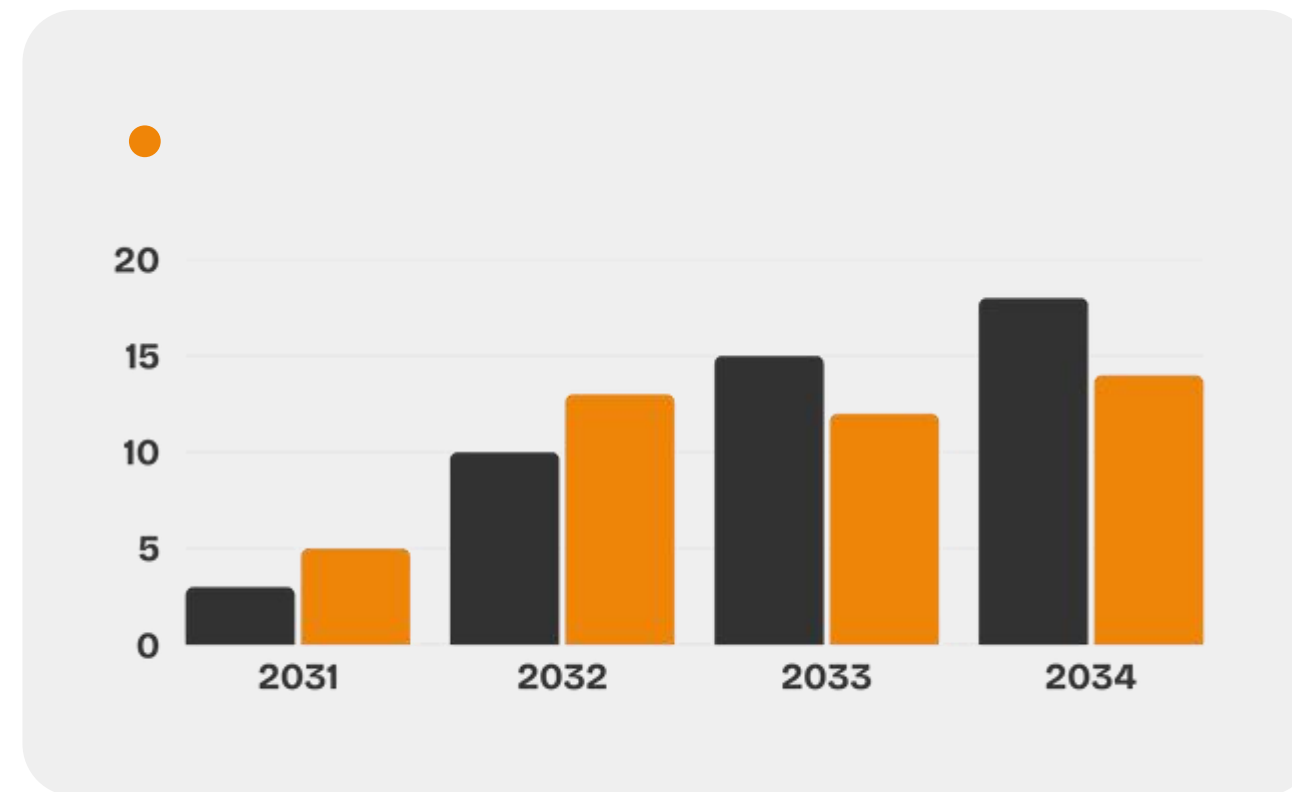

- Loan status reports
- Active vs closed loans
- EMI overdue reports
- Customer-wise loan summaries

March 24, 2036

Testing Strategy

- Unit testing using JUnit 5 & Mockito
- API testing using Postman
- Validation & error handling test cases
- Environment-based configuration

users	roles
backend	<ul style="list-style-type: none">• Java 17, Spring Boot, JPA, Hibernate, JWT, MySQL/PostgreSQL
frontend	<ul style="list-style-type: none">• Angular, TypeScript, Angular Material
tools	<ul style="list-style-type: none">• Postman, Git, GitHub, Maven

Conclusion

The Loan Management System successfully demonstrates a real-world, enterprise-grade full-stack application with secure authentication, clean architecture, modular design, and end-to-end loan lifecycle management. The project is scalable, maintainable, and aligned with industry standards.
